Education

New York University	Sep. 2026 - May. 2028
M.S. in Data Science	New York, NY
Worcester Polytechnic Institute	Aug. 2023 - May. 2026
B.S. in Data Science, Minor in Statistics - 3.7/4	Worcester, MA

Relevant Coursework:

Algorithms, AI, Computational Data Intelligence, Design and Analysis of Experiments, Statistical Learning, Databases, Generative AI, Statistics, IR, ML, NLP, Stochastic Processes

Selected Publications

NEAT-IR: Neural Explainable Analysis Tool for Information Retrieval April 2026
[ACL 2026 SRW](#)

Lev Sukherman, *Artem Frenk*, Nina Klimenkova, Connor Jason

SAVeD: Semantically Aware Version Discovery

[Targeting Submission to ICLR 2026](#)

Artem Frenk, Roe Shraga

Investigating the Robustness of Knowledge Tracing Models in the Presence of Student Conceptual Drift Submitted Apr. 2026

[JEDM 2026](#)

Artem Frenk, Morgan Lee, Eamon Worden, Karish Gupta, Thinh Pham, Ethan Croteau, Neil Heffernan

Experience

AI Research Scientist Intern, Pangram – Brooklyn, NY Apr 2026 - Present

- Led effort on HMM-based inference of the Pangram model which decreased false positive on AI/human mixed text by up to 64% in very adversarial cases.
- Assisted in creation of vLLM infrastructure for Nemotron 3 rewrite, improving performance by up to 50% in bottlenecked areas of the Mamba backend.

Machine Learning Engineering Intern, MTA – New York, NY Jun. 2025 - Aug. 2025

- Generated tabular data with CTGAN, VAE, and a Discrete Diffusion model, allowing for a 45% faster creation process of data.
- Created and served custom graph-transformer based direction prediction service to 50,000 pre-alpha customers in the MTA app.

Undergraduate Student Researcher, The ASSISTments Foundation – Worcester, MA Sept. 2024 - May 2025

- Optimized the Reinforcement Learning Service leading to a 68% latency reduction for queries to the database. Improved student hint retrieval with both the LinUCB and epsilon greedy Reinforcement Learning algorithms.
- Created Self-Attentive Knowledge Tracing architecture to handle student data for a Knowledge Tracing task using PyTorch, resulting in an AUC of 87% on previously unprocessed data.

Projects

[DiffuKalshi](#) Apr 2025

- Built a SDE-based prediction market forecaster encompassing a LSTM, conditional VAE, and score based diffusion model
- Evaluated Brier-Score, Expected Calibration Error, and other distributional metrics to ensure alignment for models.

[Text to Speech Ensemble](#) Oct. 2024

- Explored various approaches to text-to-speech modeling, focusing on data preprocessing, model architectures, training strategies, and evaluation methods.
- Compared three different models: a sequence-to-sequence model with Location Sensitive Attention, a GRU-Augmented model similar to Tacotron2, and a transformer based model.

Skills

Technical Languages: Python, R, SQL, C, Zig, Go, Java, Typescript

Machine Learning Libraries: PyTorch, JAX, Tensorflow, ONNX

Data Science Tools: Pandas, Polars, Numpy, Scipy, Statsmodels, ScikitLearn

Database Systems: PostgreSQL, DuckDB, Oracle DBMS, SQLite, MongoDB, Firestore

Languages: English, Russian, Spanish
